FIND A BETTER BALANCE

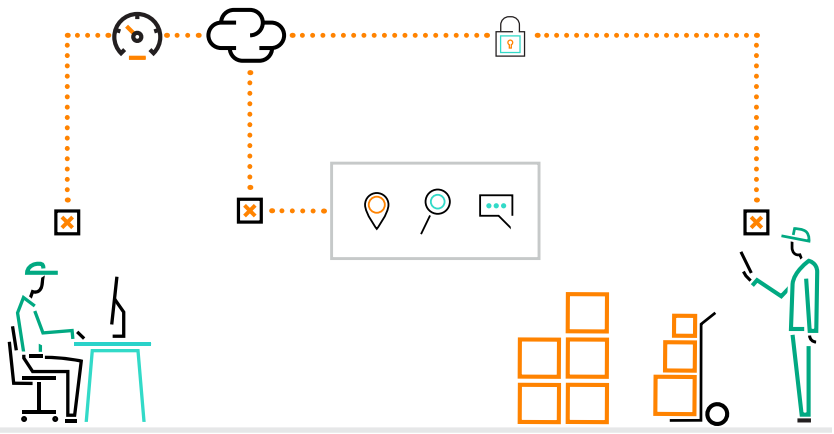

Imagine you run a small moving business. Your business booms every Spring and Summer. How can you strike the right balance with IT so you can be sure you get—and pay for—just what you need, when you need it?

WHAT VIRTUALISATION MODEL WORKS BEST FOR YOU?

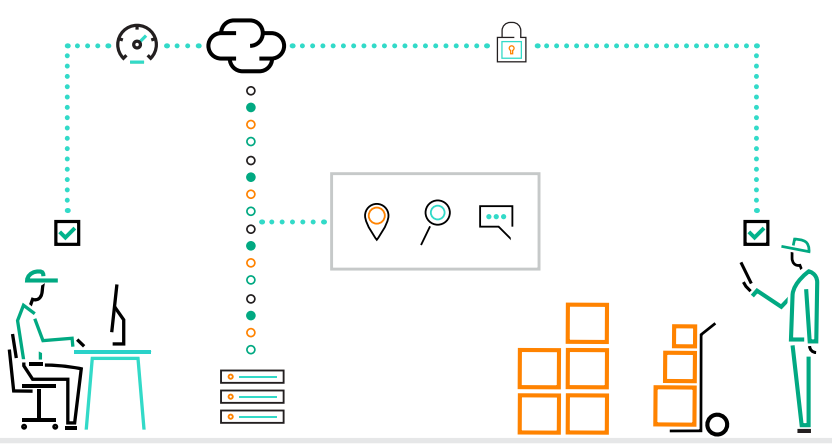

Cloud only

Convenient and scalable, but subject to performance issues, service disruptions, and unknown security practices.

Cloud + on-premises

On-premises virtualisation lets you allocate resources to applications as needed, so you can run multiple applications on a single server. Evolving to a hybrid cloud model gives you the flexibility to expand into the cloud for more capacity and business continuity.

Leverage Microsoft Windows Server with Hyper-V and Microsoft Azure Cloud Services.

Increase IT efficiency

Optimise resources and delay additional hardware purchases; tap into the cloud to better balance resources during peak demands.

Keep the business running

Failover between virtual machines to keep data available; increase availability with cloud backup.

HPE HELPS YOU KEEP PACE WITH DEMAND

HPE Small Business Solutions enable you to accommodate unpredictable workloads with solutions based on HPE ProLiant servers powered by Intel®.
